Assistive Technology for Communication

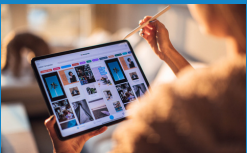

Assistive Technology for communication are used to help people with communication difficulties express their wants, needs, and ideas to the people around them.

Low Tech - Pencil and paper, marker and white board, picture/object/symbol choices, eye gaze communication board, picture exchange system, sign language

Mid Tech - Talking switches, talking watches, talking battery operated devices with variable messaging levels

High Tech - tablet or smartphone with communication app, stand alone speech generating device, switch access, head tracking, pointer, eye gaze access, direct select, scanning selection

Assistive Technology Resource Centers of Hawai'i (ATRC) is a nonprofit organization that provides information, resources, demonstrations, and device loans to help people make informed decisions and select the AT that best meets their needs. We do not sell or endorse any particular products.
